

Lehigh Materials - Sechelt Mine - Radial Stacker Demolition Project

Sector: Mining - Sand and Gravel Processing.
Location: Sechelt, BC
Owner: Lehigh Hansen Canada
Completion: February 2008
Consultant: J.R. MacKenzie Engineering

Project Highlights:

Winter 2008 Lehigh made the emergency call out to Brymark when they had a structural failure on one of the radial stackers at their Sechelt Site. Brymark field crews executed the mobilization and stabilization of the stacker right away. While this was taking place Brymark and J.R. MacKenzie Engineering planned a complicated and rare 3 crane lift to enable a safe demolition of the stacker. The detailed planning backed up with our seasoned field crews resulted in a successful incident free project.
